FIRM OVERVIEW

WE BUILD SUPER-INTELLIGENT SOLUTIONS.

ADVANCED SOLUTIONS FOR FEDERAL AND SLED

Our firm uses deep expertise and solutioneering paired with superintelligent agents to deploy advanced solutions for federal and SLED. We work the hard problem with your team, then deliver it as running software inside your environment.

WHAT WE DO

01
UNDERSTAND THE PROBLEM
We start inside the mission: the process, the data, the policy and the people. We test ideas against real cases before anything is built.

02
BUILD WHAT WORKS
Engineers and agents deliver working systems: automations, apps and integrations, not slideware or a proof of concept that stops.

03
RUN AND IMPROVE
We stay through deployment, measure the results and keep improving. Your team gets the evidence, the code and the runbook.

WHO WE SERVE

01
FEDERAL AGENCIES
Civilian and defense programs that need AI inside their security boundary.

02
STATE + LOCAL
Departments modernizing public works, finance, permitting and casework.

03
EDUCATION
Institutions running complex administration on aging systems.

04
PRIMES + PARTNERS
Teams that need a delivery partner for an AI work package.

DELIVERY
EXPERT-LED, AGENT-ACCELERATED

PRODUCT
PAPYRUS

DEPLOYS
INSIDE YOUR BOUNDARY

OPERATING MODEL

EXPERT-LED. AGENT-ACCELERATED.

Our engineers own understanding of the mission, the approvals and accountability for delivery. Superintelligent agents do the heavy lifting in between: research, analysis, implementation, testing and documentation, inside a controlled and reviewed workflow.

HOW WE WORK

01 DISCOVER
Mission context, constraints, stakeholders and systems.

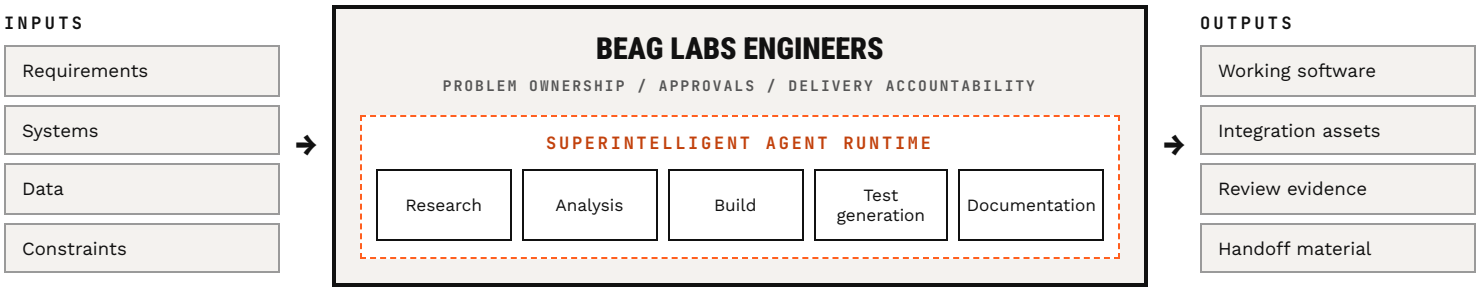

02 PROTOTYPE
Test the approach on real data and real cases, fast.

03 BUILD
Implementation, integration, tests and docs, accelerated by agents.

04 VALIDATE
Human review, security checks, evidence and acceptance.

05 DEPLOY + RUN
Hardening, rollout, enablement and continuous improvement.

GOVERNED DELIVERY LOOP

- **Human approval.** Engineers review and approve key steps and outputs.
- **Your approved tools.** Work runs in your environment with your approved models.
- **Tracked work.** Every change is versioned, attributable and auditable.
- **Review-ready outputs.** Documentation and evidence ship with the system.

WHAT CUSTOMERS GET

01 FASTER ITERATION
Deliver more, sooner, with agent acceleration.

02 BETTER TRACEABILITY
A clear record of decisions, changes and evidence.

03 PRACTICAL HANDOFF
Reusable artifacts and documented workflows.

04 MISSION-FIT OUTPUTS
Built for your constraints and requirements.

THE DIFFERENCE

AGENTS DO THE WORK. PEOPLE OWN IT.

Every engagement pairs senior engineers with superintelligent agents, so work moves at machine speed while decisions, approvals and accountability stay with people.

SOLUTION AREAS

FOUR WAYS WE PUT AGENTS TO WORK.

Each area starts from systems you already own. We connect them, build practical ways for your team to use them, and keep people in charge of the decisions that matter.

01 / Documents → structured work

DOCUMENT AUTOMATION

Turn PDFs, forms and office files into structured information, reviewable actions and repeatable workflows.

How it runs

- Read source documents
- Extract and normalize fields
- Review evidence and approve

Typical work

Grant files, permits, claims, invoices, contracts

02 / Requirements → working apps

INTERNAL APPLICATIONS

Create the apps, forms and dashboards for processes your organization already runs, generated from a description and refined with your team.

How it runs

- Describe the process
- Generate usable interfaces
- Validate, deploy, iterate

Typical work

Intake portals, trackers, review queues, reporting

03 / Legacy systems → modern services

LEGACY MODERNIZATION

Make terminals and SOAP/XML services usable through modern APIs and browser interfaces, while systems of record stay in place.

How it runs

- Connect existing systems
- Expose governed APIs
- Give operators a better UX

Typical work

Mainframe screens, 3270 terminals, SOAP services

04 / Processes → governed automation

BACK-OFFICE OPERATIONS

Automate work that spans finance, procurement and operations with Papyrus: a data model, durable agents and human approvals.

How it runs

- Model the records
- Automate the routine path
- Route exceptions to people

Typical work

Payables, receivables, reconciliation, case management

EVERY ENGAGEMENT INCLUDES

01
DISCOVERY MEMO
The problem, the systems involved and the approach we recommend.

02
WORKING SOFTWARE
Running in your environment, not a demo on our laptop.

03
DEPLOYMENT ASSETS
Infrastructure, configuration and a runbook your team can own.

04
EVIDENCE PACKAGE
Tests, review records and documentation for your approvers.

ENGAGEMENT

START BOUNDED. SCALE ON EVIDENCE.

We operate within your program, security and governance structure and own a bounded technical outcome, not generic staff augmentation. A successful first engagement earns the next, larger one.

WAYS TO ENGAGE

01

SOLUTION SPRINT

A short, focused look at one problem.

- Process and systems walkthrough
- Working prototype on real cases
- Recommendation and cost to deliver

02

INITIAL WORK PACKAGE

60–90 days to a governed, working deployment.

- Deployed inside your boundary
- Built and tested against acceptance criteria
- Runbook, evidence and handoff

03

PRODUCTION + OPERATIONS

Scale what worked, and keep it running.

- More processes, entities and users
- Monitoring and continuous improvement
- Papyrus licensing and support

HOW WE OPERATE

01

PROGRAM-ALIGNED

Scoped to a funded program, task order, pilot or requirement.

02

BOUNDARY-ALIGNED

Access, data, models and tools follow your approved environment.

03

OUTCOME-OWNED

We own implementation, tests, deployment, docs and handoff.

04

SCALE-EARNED

Each package creates evidence for the next assignment.

COMMERCIAL

Commercial teams run Papyrus in their own AWS or Azure account, starting with a pilot.

NEXT STEP

BRING US THE HARD PROBLEM.

We will come back with an approach, a prototype plan and a path to production.
