

Agent UX Consulting

Design agentic experiences users actually trust and complete.

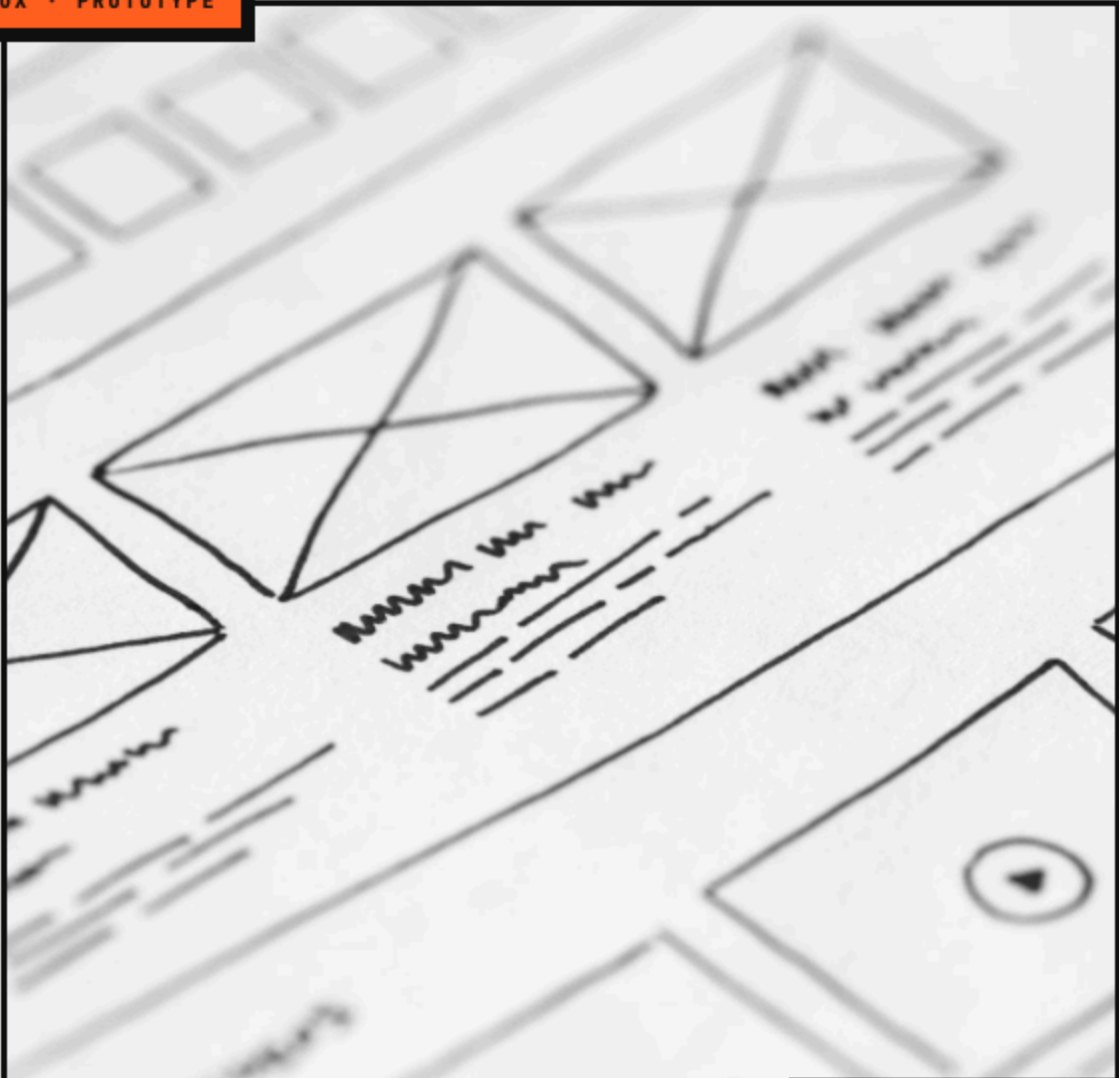

Most agent failures aren't model failures — they're design failures. We help product teams design agentic experiences that recover from errors, disclose what they're doing, respect latency budgets, and don't overwhelm the user with what the model is thinking.

Have a model but the UX is the bottleneck? →

ALL CAPABILITIES

UX • PROTOTYPE

The whole vertical slice, not a fragment.

What we cover

The full surface area of an agentic product, not just the chat box.

- Interaction patterns for autonomous and supervised agents
- Disclosure design — what to show, what to hide, when to ask
- Recovery from agent errors without losing user trust
- Latency budgets that match what users will actually wait for

What we deliver

A working prototype plus the design system to extend it.

- Annotated wireframes and interaction specs
- A clickable prototype backed by a real model
- A design system your team can extend without us
- Recorded walkthrough of the design rationale

Who this is for

Product teams that already have a model and a use case but the UX is the bottleneck.

- Internal tooling teams shipping agents to ops
- Consumer products with an AI surface that feels off
- B2B SaaS adding agent features to existing workflows
- Founders about to ship an agent for the first time

Three steps. No surprises.

01

Audit

One week. We sit with your team, watch users fail, and write up what we found.

02

Prototype

Three weeks. A clickable prototype backed by a real model, with the failure modes built in.

03

Handoff

One week. A design system, a recorded walkthrough, and async support for the next sprint.

SENIOR DESIGNER, NOT A DECK

NEXT STEP

Have a model but the UX is the bottleneck?

We'll watch three users fail, then build the fix.
