

Legacy Data Extraction

Read your mainframe without rewriting it.

We modernize things like mainframe data without affecting the core data using SLMs. We sit alongside your system of record — COBOL, AS/400, DB2, EDI, fixed-width tapes, scanned PDFs — and pull the fields your modern apps actually need.

Got a system nobody wants to touch? →

ALL CAPABILITIES

ON-PREM • AIR-GAPPED

BEAGLABS / MODERNIZATION

The whole vertical slice, not a fragment.

What we read

Every format still running in production, including the ones nobody wants to touch.

- COBOL, RPG, AS/400, DB2, VSAM record layouts
- Fixed-width, EBCDIC, EDI X12 / EDIFACT
- Scanned PDFs and TIFFs via OCR + SLM
- Green-screen terminal session parsing

How it ships

Field-level outputs that drop into the systems you already run.

- JSON / Parquet to your warehouse or lake
- Streaming records to Kafka, Kinesis, or pub/sub
- Validated against your golden record when one exists
- Replayable runs against historical archives

What we never do

The system of record stays untouched. Always.

- No writes back to the mainframe
- No schema changes to source systems
- No vendor lock-in — you own the pipeline
- No data leaves your perimeter without approval

Three steps. No surprises.

01

Inventory

Two weeks. We read your source, document every format, and produce a written map of the data.

02

Build

Four to six weeks. We train the SLM on your real records, ship the pipeline, and validate against ground truth.

03

Run

Hand-off to your team with runbooks, monitoring, and an upgrade path. We stay on retainer.
