

# SLM Feasibility & Savings

**2–4 week paid assessment. Quality, \$/year, go/no-go.**

Before you commit to building, we take a sample of your actual workload, build a small model that handles it, and produce a written report with quality benchmarks vs. your current API, projected \$/year savings at production volume, and a go/no-go recommendation. Most engagements pay back the assessment fee 50–100x in year one.

Wondering if an SLM actually pays off for your workload? →

ALL CAPABILITIES

2-4 WK • FIXED FEE

BEAGLABS / SLM-FEASIBILITY

# The whole vertical slice, not a fragment.

## What we measure

The numbers you actually need to make a build / buy / stay decision.

- Quality on your real eval set vs. your current API
- P50 / P95 / P99 latency at projected production volume
- Cost per 1k requests at 1x, 10x, and 100x current scale
- Failure modes and the cost of getting them wrong

## What's in the report

A 20–40 page document you can hand to your CFO.

- Executive summary with go / no-go recommendation
- Side-by-side quality benchmarks on your data
- Three-year cost projection under realistic assumptions
- A concrete deployment plan if the answer is "go"

## How we de-risk it

You don't pay the full fee unless we believe the numbers work.

- Week 1: a 48-hour sniff test on a small sample
- No-fee exit if the workload isn't a fit
- Fixed-fee engagement — no surprise invoices
- NDA and data residency handled upfront

# Three steps. No surprises.

01

## Sample

You send us 1k–10k representative examples. We sign the NDA, set up the secure channel.

02

## Train

We fine-tune a small model on your data, run it against your eval set, and measure cost.

03

## Report

A 20–40 page report with the benchmarks, the projection, and a go / no-go recommendation.

2–4

WEEKS, FIXED FEE

50–100x

MEDIAN YEAR-ONE PAYBACK

0

COST IF WE SAY "THIS ISN'T A FIT"

NEXT STEP

# Wondering if an SLM actually pays off for your workload?

Send 1k examples. We'll have numbers in two weeks.
