

AI-Enabled Software Development

We embed with your team and ship a working AI feature in 6–10 weeks.

We don't bolt on a chatbot. We own the model training, evaluation, infra, and the integration code end-to-end — then hand it to your team in a state they can actually run. You ship a real feature, not a demo.

Have a feature that's been stuck in 'AI someday'? →

ALL CAPABILITIES

EMBEDDED • 6–10 WK

BEAGLABS / SPEC-DRIVE-DEVELOPMENT

The whole vertical slice, not a fragment.

What we own

The full vertical slice from data to production traffic.
Your team owns it after we leave.

- Data curation, labeling, and eval set design
- SLM training, fine-tuning, and quantization
- Inference server selection and deployment
- API + SDK that matches your existing patterns

What we measure

The numbers that actually matter when the feature is in front of users.

- Quality on your real eval set — not a benchmark
- P50 / P95 / P99 latency under realistic load
- Cost per request at projected production volume
- Failure modes and recovery paths

How we hand off

You can run this without us. That's the test.

- Code merged into your monorepo, not a sandbox
- Runbooks for the on-call rotation
- A/B framework so you can ship behind a flag
- Recorded walkthroughs for your team

Three steps. No surprises.

01

Scope

Two weeks. We agree on the user-facing feature, the eval set, and the success metrics.

02

Build

Four to six weeks. Weekly demos. Real users by week six. Slack channel with your team.

03

Ship & transfer

Two weeks. Production rollout behind a flag, then knowledge transfer to your engineers.

6–10

WEEKS FROM KICKOFF TO PRODUCTION
